

A fabric as role model

For Sattler, environmental protection is more than an empty phrase. It is rather a motto which we live up to every day.

- We use the exhaust steam energy of our equipment for our hot water system and to heat our production halls and office premises
- Our awning fabrics are cleansed using only natural potter's earth and cold water
- All company buildings are kept cool in summer with textile sun protection instead of air-conditioning
- All production waste and clippings are recycled as packaging and filling materials or for agricultural use
- Our products comply with the strict REACH regulations

Responsible manufacturing is what counts. Our goal is to be a role model. Therefore, certification according to ISO standards 9001:2008 and 14001:2004 as well as the OEKO-TEX® Standard 100 are a must for us.

This annual certification is particularly important to us, since it guarantees that our fabrics are harmless for both humans and for our environment.

ENVIRONMENT
Shading with a clean conscience
